

LETTUCE

Lactuca sativa

Parris Island Cos - Parris Island Cos is the most common variety used to produce green romaine baby leaves. Leaves are medium green, slightly savoyed with a smooth edge. Baby leaves in 28 days.

Oakleaf Green - Producing medium-dark green deeply lobed oak leaf shaped leaves. Oakleaf Green has very good resistance to hot weather and is never bitter. Baby leaves in 28 days.

Oakleaf Red - Oak leaf shaped leaves are medium green with red and green veining underneath a red surface blush. Fuller sun brings out the deep-red colour. Some heat resistance. Baby leaves in 28 days. Good regrowth for multiple cuttings.

Salad Bowl Green - Forms large, lime-green rosettes of delicate, tender, deep-notched oak-like leaves. Good resistance to bolting. Relatively good heat tolerance and does not get bitter in hot weather. Baby leaves in 28 days. Full size in 49-60 days.

Salad Bowl Red - A bronze burgundy red version of Salad Bowl with the same deeply lobed oak-like leaves and good heat tolerance. Holds its mild, non-bitter salad quality for a long time. Popular with baby leaf growers and can be cut for baby leaves in 28 days. Full size in 51 to 58 days.
